

KISHORE D

NETWORK SECURITY ANALYST | SOC L1 | SIEM & EDR MONITORING

Chennai, Tamil Nadu | +91 6382052095 | kishoredasarathan4@gmail.com

PROFESSIONAL SUMMARY

Network Security Analyst with hands-on experience in SOC operations, endpoint detection and response (CrowdStrike Falcon EDR), SIEM monitoring, and network security administration. Skilled in security alert triage, log analysis, firewall management, and incident response. SOC L1 certified with a strong foundation in threat detection, network monitoring, and vulnerability assessment. Seeking to apply hands-on security monitoring and incident response experience in a SOC Analyst L1 role.

TECHNICAL SKILLS

SOC & Security Monitoring: SOC Alert Triage, SIEM Monitoring, Endpoint Detection & Response (EDR), Incident Response, Log Analysis, Threat Detection, Vulnerability Assessment

Network Security: Firewall Administration, IDS/IPS, VLAN Configuration, Routing & Switching, IP Addressing & Subnetting, Wireless Network Security

Security Tools & Platforms: CrowdStrike Falcon EDR, Falcon Next-Gen SIEM, Wazuh, Splunk, Microsoft Azure Sentinel, Zabbix NMS, Wireshark, Nmap, Metasploit, Virus Total, Snort

Systems & Administration: Windows Server (Active Directory, DNS, DHCP), Linux Administration, VMware ESXi, NAS Storage Administration

Application & Web Security: Web Penetration Testing, Bug Hunting

Operating Systems: Windows, Linux

CERTIFICATIONS

- SOC L1 - Cyberthreya
- CCNA - Suren Networks
- Ethical Hacking Essentials (EHE) - EC-Council
- SQL Injection Attacks - EC-Council
- Introduction to Splunk – Splunk
- Cybersecurity Essentials - Cisco

PROFESSIONAL EXPERIENCE

Network Security Analyst — Dr. Mehta's Multispeciality Hospitals

Sep 2024 - Present

Chennai, Tamil Nadu

- Monitored and triaged security alerts using CrowdStrike Falcon EDR for endpoint protection and incident response, with operational exposure to Falcon Next-Gen SIEM for security investigation and support.
- Administered Zabbix NMS with custom dashboards and alerts, enabling proactive monitoring of servers and network devices.
- Managed firewall operations including policy configuration, rule audits, traffic monitoring, and performance tuning to maintain secure and reliable network operations.
- Administered UniFi AP Controller, performing health monitoring, troubleshooting, and configuration backups for wireless network infrastructure.
- Provided LAN and switch support through VLAN setup and port management; managed L2 and L3 (core) switches to ensure stable network performance.
- Administered Windows servers (DHCP, DNS, Active Directory) and NAS storage systems, managing storage allocation, permissions, and user access.
- Managed VMware ESXi servers, including provisioning and configuration of virtual machines to support business operations.
- Tracked and resolved network and security issues using the SHIVAM ticketing tool, ensuring timely incident management and service continuity.
- Supported ISO 27001 compliance activities related to security policies, access control, and audit readiness.

PROJECTS

Wazuh SIEM Deployment for Threat Detection & Incident Response

- Deployed and configured Wazuh SIEM to collect and correlate logs from endpoints, switches, and firewalls via Syslog, building custom dashboards and automated alert rules to enable real-time threat detection and reduce incident response time.

Network Traffic Analysis & Intrusion Detection Lab

- Performed port scanning on a Windows machine and captured live network traffic using Wireshark to analyze packet flow, identify open ports, and understand common network reconnaissance techniques.
- Installed and configured Snort IDS on Ubuntu, then simulated a DoS attack using hping3 to generate malicious traffic and validate Snort's ability to detect and alert on attack patterns.

Splunk Log Analysis Lab

- Installed and configured Splunk, ingesting AI-generated sample log datasets to practice basic field extraction using SPL (Search Processing Language).
- Formulated basic investigative questions based on log data and used simple SPL queries to search and filter events, building foundational log analysis skills relevant to SOC monitoring.

Microsoft Azure Sentinel SIEM Lab

- Set up a basic Microsoft Azure environment by creating a resource group, Log Analytics Workspace, and a virtual machine, then installed the Azure Monitor Agent to onboard the VM for centralized log collection.
- Generated failed login attempts on the VM and used Microsoft Sentinel to filter and analyze the resulting security logs with basic KQL (Kusto Query Language) queries to identify suspicious sign-in activity.

EDUCATION

Apollo Arts and Science College, Chennai

BCA - Bachelor of Computer Applications | Chennai, Tamil Nadu

Mar 2021 - Apr 2024

Little Jacky Matriculation School, Chengalpattu

HSC | Chengalpattu, Tamil Nadu

Mar 2021

Little Jacky Matriculation School, Chengalpattu

SSLC | Chengalpattu, Tamil Nadu

Mar 2019

AREAS OF INTEREST

Target Roles: SOC Analyst, SecOps Engineer, Network Security Analyst, Cybersecurity Analyst

SOFT SKILLS

Strengths: Problem Solving, Curiosity & Continuous Learning, Adaptability, Attention to Detail
